PROJECTS

The Yada — *Google Chrome Extension for online article summaries*

The Yada is a [Chrome Extension](#) which allows users to create and read existing summaries of online articles without leaving the article page. Users can also view The Yada's home page to see the current trending articles which have been summarized and rated within the extension. The Yada was my final group project for The Iron Yard. See it live [here](#). GitHub repository [here](#).

Updawwg — *Web Application for sharing your dog with the world*

Updawwg is a single-page application built with the Spring MVC Framework for Java on the back end. Users are able to post images, GIFs, and videos of their dog and then have other users vote for their dog. This was a weekend group project for The Iron Yard. GitHub repository [here](#).

JobTracker — *Application to track pending job applications*

JobTracker is a CRUD application built with the Spring MVC Framework for Java on the back end. It uses mustache templating and jQuery to create some animations on the front end. This was a personal weekend assignment for The Iron Yard. GitHub repository [here](#).

EXPERIENCE

Issues & Answers Network, Inc.
Virginia Beach, VA — *Programmer*
June 2014 - May 2016

- ➢ Programmed surveys for web and phone interviews based on client specs
